Persistent Identifiers (PIDs) are unique and permanent digital references that make it possible to find, access, reuse, and cite digital information objects of any type on the web.

Avoid broken URLs, use PIDs!

Persistent Identifiers (PIDs) are unique and permanent digital references that make it possible to find, access, reuse, and cite digital information objects of any type on the web.

How do PIDs work?

Users are redirected to the URL that is associated with the identifier. If the physical location of the object changes, the URL is the only modification required; the PID itself does not change.

At UCSB, we support two PID systems, at no cost to affiliates:

- Digital Object Identifier (DOI)
- Archival Resource Key (ARK)

Need to assign DOIs or ARKs to your digital resources? We can help you!
